Intro

We want to put a set of data in a standard format.

The data is composed of car maker, car model, car year and car type.
Here is an example:

Audi A6 1997 2.8 4p

We have a comprehensive list 🌼𝔸🌼 of car submodels with the names in a standard way.

Here is a sample:

Audi	A6	2015	2.0 Tfsi Ambiente S-tronic 4p
Audi	A6	1997	2.8 4p
BMW	Serie 3	1995	1.9 3p
BMW	Serie 3	1995	1.9 Aut. 3p
BMW	Serie 3	1996	1.9 3p
BMW	Serie 3	1996	1.9 Aut. 3p
Chevrolet	Blazer	1996	2.2 Std 5p
Chevrolet	Blazer	1996	2.5 Dlx Turbo 5p

We have a list 🌼𝔹🌼 of car submodels with the names organised in another way.

Here is a sample:

AUDI 80 1982@#1.8
AUDI 80 1983@#1.8
VOLKSWAGEN PASSAT 1990@#SURF 1.8 8V
VOLKSWAGEN PASSAT 1992@#VR6 2.8 12V
VOLKSWAGEN PASSAT 1993@#VR6 2.8 12V

("@#" was added to help to parse or finding the year)

We need to associate each item in the 𝔹 list to one item in the 𝔸 list, or vice versa.

Please find the files in the attachment.
